EDUCATION

Bachelor of Science / *Texas A&M University* Aug 2016 – Dec 2021

- Degree in Mechatronics Engineering, with a minor in Embedded Systems

Master of Science / *East Texas A&M University* June 2025 – Present

- Degree in Business Analytics, with an emphasis in Cybersecurity
  (CGPA 3.8)

JOB HISTORY

Franchise Manager | DHL Express May 2025 – Present

- Spearheaded operational and service improvements that increased monthly store revenue by an average of $10,000 within two months showcasing strong business prowess and data-driven decision-making.
- Developed and executed customer retention programs by focusing on incentivizing sales, resulting in repeat-business growth and enhanced customer lifetime value.
- Utilized search engine optimization tools to maximize our visibility to consumers shipping internationally.
- Expanded service portfolio by launching notary, printing, copying, and lamination services, which helped diversify our revenue streams and improve overall foot traffic.

Failure Analysis Engineer | Texas Instruments Inc. April 2022 – April 2025

- Performed failure analysis on products to determine the root cause of failure. Utilized cutting edge tools such as Scanning Acoustic Microscope (SAM), Scanning Electron Microscope (SEM), Laser decapsulators, curve tracers, X-ray and various Lab Equipment to perform analysis on failing TI units. Utilized these tools to perform Wafer level and Package level FA, including but not limited to, fault isolation, device deprocessing/delayering, OBIRCH, and emission microscopy. Shared root cause analysis findings with Product Engineers to help determine the next course of action.
- Supported TI recruiting team to interview NCG talent. Attended Info Sessions, Career Fairs, and online sessions to recruit sharp candidates.
- Worked as part of AEC-Q006 team to ensure units meet qualification standards for passing. Specialized in cross-section analysis of various automotive parts. Performed Visual Quality and Reliability Inspection, bond pull/shear on decapsulated units to meet AEC-Q006 requirements. Documented all finding through Engineering Reports.
- Assigned tool owner for multiple tools in the lab including DAGE 4000 Bond pull machine, 4K Keyence VHX microscope, Laser Decapsulators, and Lock-In Thermography Thermal Imaging bench. Trained individuals to use aforementioned tools. Ensured the tools remain in working order, and acted as the contact with tool manufacturers.

PROJECTS

SafetyNode Vehicle-to-Vehicle (V2V) Communication Device:

- Manufactured a V2V communication device that enabled exchange of a vehicle's position, speed, acceleration, and driver rating with other cars in the near vicinity, to facilitate traffic autonomously.
- Designed and fabricated the PCB board in Altium, which was responsible for the power regulation and Raspberry Pi interface. 3D printed prototype enclosure modeled in AutoCAD.
- Programmed webapp/UI in JavaScript/HTML/CSS and used Python3 to program the Raspberry Pi. Created an IOT cloud to facilitate communication between multiple devices.
- Handled all hardware components and spearheaded the hardware R&D as the Hardware Lead. Obtained intellectual rights for the completed prototype with an end-goal of large-scale commercialization.
